

Hi Vis Traditional Polo

Artwork Specifications For EMBROIDERY

UDFYN

Uploading Files

For files over 200MB please email the design.
Remember to use your order number in the subject
info@udfyn.com.au

Recommended File Formats

Other Accepted File Formats

In general our graphics team accepts most types of artwork. We can digitise JPEG, PNG, AI, PDF, TIFF, PSD even pictures of drawings. It's important to remember, the clearer the reference image, the better the embroidery will be as the process of digitising involves the recreation of your logo or design. The clearer the reference image the the more exact th digitised files will be.

If your artwork involves intricate designs or letters, be sure to inspect the file, making sure all design elements are at least 6mm high. Smaller letters will start to overlap, look messy and sometimes appear squashed. Fine details and gradients do not translate well when embroidered.

We'll review your file prior to production and make any note or required changes to the file to best ensure the integrity of the design is maintained whilst improving the quality of the embroidered product.

Important Note:

PMS Colour Referencing and size guides are recommended. If you would like your logo or design to be produced in a particular colour or size please supply PMS Colours and size specs in the comment section when uploading your logo. If you do not supply a PMS colour or size reference our team will choose for you. Embroidery sample swatches are provided prior to the production of every new logo.
