Important Note :

Colour Matching
We strive to provide the best possible prints; however, we do not offer a colour matching service.
Colours may vary due to inks, design files, garment colours, materials and minitors/screens.
Most of our machines print in CMYK, we cannot print RGB files.
If you forget or do not know how to, our printers will automatically convert the file for you.

Print Placement
While printing, we do our best to ensure designs are printed in consistent locations on all shirts in the run. However, small variations should be expected. All garments are sewn differently, and variations in each individual shirt may result in varied placements.

If the desired print location is near a seam or a collar, these variances may be more noticeable.

Specialty Colours
We do not offer Fluro, Hi-Vis or Metallic print colours.
